NE Water Issue Resolved; Water Consumption Resumes

**(KLZA)--Auburn, Nebraska residents can again consume the public water, following successful repairs made Wednesday afternoon.**

**That comes following what the Auburn Board of Public Works calls a chemical feed malfunction at the Peru Water Plant.**

**The problem, which occurred Wednesday, led to an overfeed of chlorine, making the water potentially unsafe to consume.**

**However, by 4:15 Wednesday afternoon, the all clear was given, with the Board of Public Works saying water can again be consumed.**
