

NSP Welcomes AgBiTech as Industry Partner

National Sorghum Producers recently welcomed AgBiTech to the NSP Industry Partner program as a Bronze Level sponsor.

AgBiTech is dedicated to providing commercial products that make pest management more sustainable and farming more profitable. AgBiTech originated in Australia, but recently completed construction of a state-of-the-art production plant, laboratory and global headquarters in Ft. Worth, Texas.

"Now more than ever, producers need cost-saving, reliable products," said Tim Lust, National Sorghum Producers CEO. "We look forward to a partnership with AgBiTech as we continue to advocate for sorghum producer needs across the United States."

As the world's leading producer of NPV-based insecticides, AgBiTech prides itself on applying their expertise in research, field development and state-of-the art manufacturing to bring solutions to major row crops around the world.

"Headworms are responsible for millions of dollars each year in bushels lost and cost associated with management," said Brian Dockery, U.S. Commercial Director at AgBiTech. "Our portfolio of NPV-based insecticides will play significant role in reducing input cost for sorghum growers looking to economically control headworms and preserve beneficial insects, therefore, partnering with National Sorghum Producers was a no-brainer for us."

The NSP Industry Partner Program helps NSP to be the best in the world at representing U.S. sorghum farmers and supporting the sorghum industry through legislative and regulatory representation. Collaborations with businesses like AgBiTech make these efforts possible.
