

NWS looking into why siren didn't sound in Marysville

**MARYSVILLE, Kan. (AP) - The National Weather Service is investigating why a warning wasn't issued for Marysville when a tornado hit the city.**

**The Kansas City Star reports that the EF1 tornado developed early Friday morning on the southwest side of the Marshall County community and went through about 3:45. The twister was about 50 yards wide and produced winds of 105 mph.**

**No injuries were reported. A home suffered roof damage and a 3,000-gallon gasoline tank was tossed around.**

**National Weather Service meteorologist Bryan Baerg said sirens for the town of 3,300 people didn't go off because no warning was issued.**

**He said the Weather Service is reviewing radar and other data to see what happened and ensure that it doesn't happen again.**
