

Notice issued for Highland water customers

**(KNZA)--The city of Highland is informing customers that the city's water may have high levels of nitrate.**

**According to a notice issued by the city, a water sample collected on March 23 showed a nitrate level of 13 milligrams per liter, which exceeds the federal maximum contaminant level of 10 milligrams per liter.**

**The release says confirmation samples are being collected to determine if there is a nitrate problem with the water quality. The city expect to know the results within the next 30 days.**

**In the meantime, as a precaution, customers are advised not to give the water to infants or use it to make infant formula, as children below the age of 6 months could become seriously ill.**

**In addition, the water should not be boiled.**

**Adults and children older than six months can drink the water. However, if you are pregnant or have specific health concerns, you may wish to consult your doctor.**
