Resurfacing project begins in Atchison County MO

(KLZA)-- A resurfacing project on U.S. Route 136 is underway in Atchison County, Missouri.

Phillips Hardy, Inc. will resurface the road and improve shoulders from the Missouri River to Interstate 29.

Traffic impacts will be minimal initially with crews clearing, grubbing and doing earthwork during daylight hours.

If a lane closure is needed throughout any portion of the project, temporary traffic signals will be used to guide motorists through the work zone.

Base widening of the roadway will begin later this fall and continue through mid-December, then resume in mid-March.

The final asphalt overlay is scheduled for the first of October, 2023.
